17 July 2024

10:30 – 15:30

**Free admission but advance
booking is required - see below***

An insight into How and Why we should try to measure the type of dementia and level of disease progression

INTERESTED IN DEMENTIA DIAGNOSIS?

- An interactive educational event for persons living with dementia, their carers, their supporters and the public.
- Hear talks from various speakers and join in activities.
- The focus of this event will be on dementia sub-typing, which identifies the type of brain disease causing the dementia, and its staging, which looks at the level of disease present.
- Light refreshments provided.

Venue : **Chandler House, (wheelchair accessible),
2 Wakefield St, London WC1N 1PF**

Nearest transport links: **King's Cross St Pancras
Tube and train station (500m), Russell Square
Tube station (500m)**

WE WILL DISCUSS:

- The challenges faced in dementia type diagnosis
- Why dementia sub-typing and staging is becoming more important
- How we might improve sub-typing and stage identification using artificial intelligence (AI)
- How people can get involved in research from the perspective of people with lived experience, clinicians and researchers.
- The event will consist of talks followed by an opportunity to participate in interactive activities and chat with presenters
